SSL

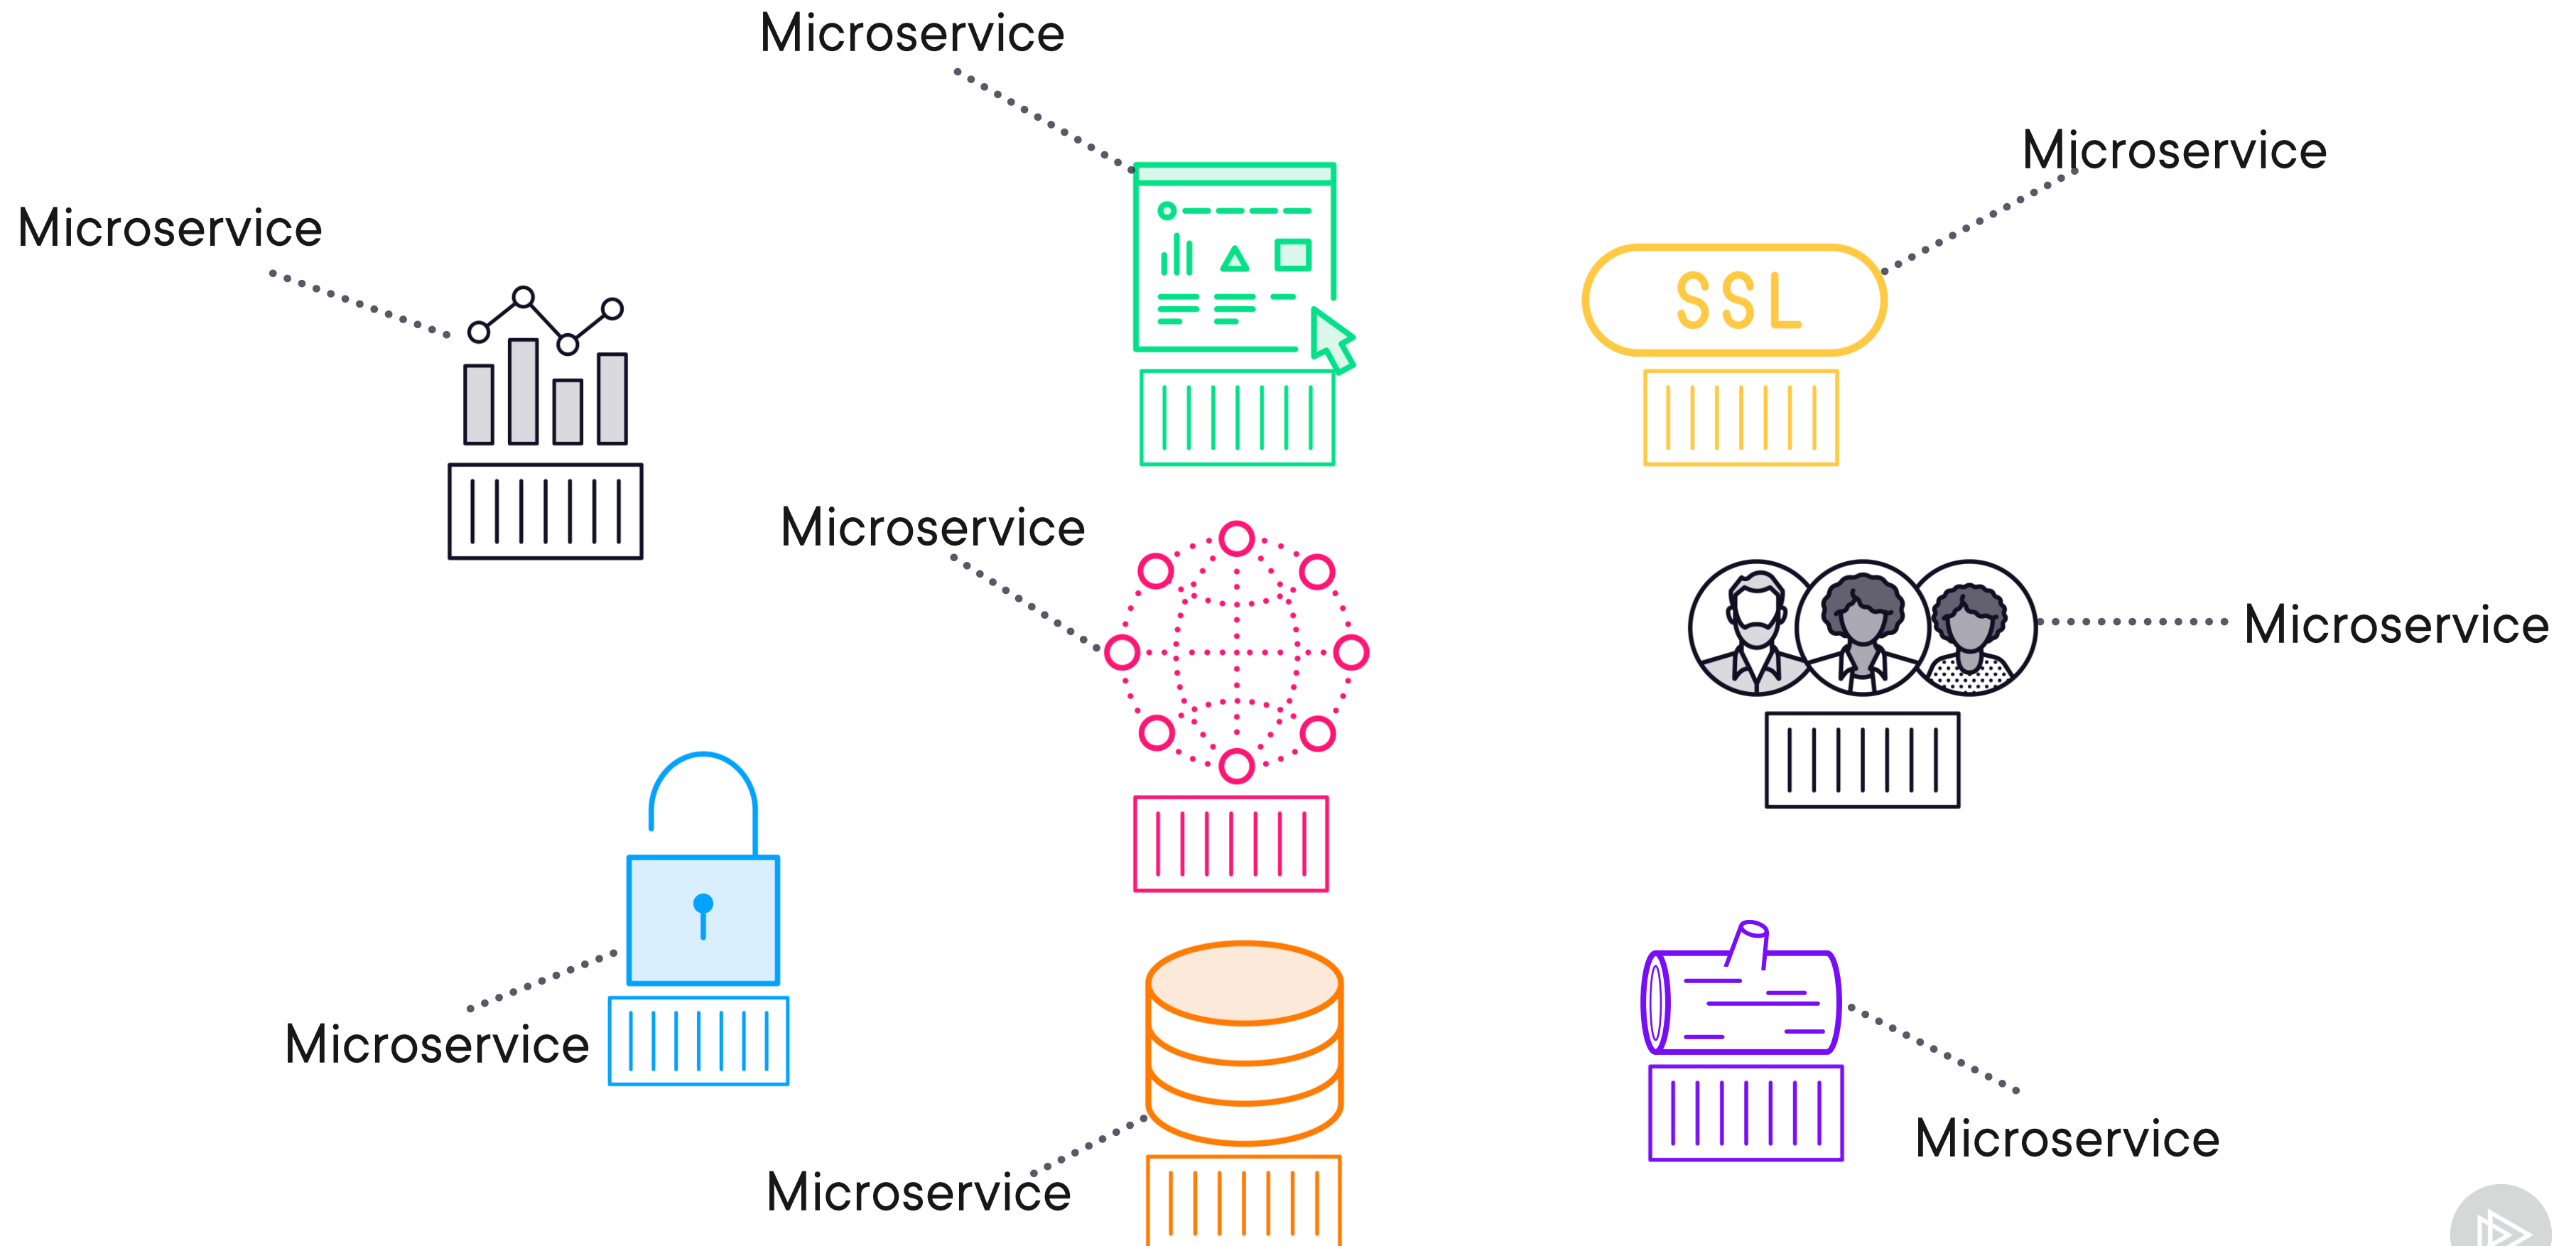

APP

SSL

Microservices

Building, deploying, and managing each application feature as its own small app.

Cloud Native

Capabilities such as self-healing, auto-scaling, rolling updates, and more...

Multi-container Apps with Docker Compose

```
$ docker image build...
```

◀ **Containerize an app**

```
$ docker image push...
```

◀ **Push to a registry**

```
$ docker container run...
```

◀ **Run as a container**

Declarative

Describe an application in a configuration file. Use that file to deploy the application.

```
$ git clone https://github.com/nigelpoulton/gsd.git  
$ cd gsd/compose
```
